

April 16, 1958

Dr. Hilary Koprowski
Director, The Wistar Institute
36th & Woodland
Philadelphia 4, Pennsylvania

Dear Hilary:

I am very grateful to you for your magnificent presentation at the conference.

May I make just one suggestion a propos your (promptly) forthcoming manuscript - that is to try to include some photographs of viral plaque markers, either from your own laboratory or the literature. I would also suggest that a careful distinction be made (as Burnet has not always been careful to do) between heterozygosis and phenotypic mixing, even though this will be enlarged upon by Hirst.

We certainly enjoyed the meeting the more for your part in it.

As ever,

JL/ew
